

SECURE REMOTE ACCESS | ONE CLICK ACTIVATION | AUTOMATIC DISCONNECTION

AcuLink Remote Access Service provides merchants and support technicians with PCI compliant remote access to devices like ATGs and DVRs, as well as more sensitive endpoints, like the point-of-sale (POS).

The AcuLink Remote Access edge computing workload, available via Acumera's PCI DSS compliant AcuVigil platform, enables:

Simple one-click activation of remote sessions

Predefined, automatic disconnection of remote sessions

Authenticated, logged and secured ephemeral connections

Compliance with PCI DSS remote access requirements

Remote access to the POS for faster, more efficient service calls and improved uptime

Compliant remote access to legacy devices like DVRs and ATGs

INCREASE SAVINGS*

Protect \$1,542 in lost sales per site due to downtime

Save an average of \$1,422 per site per year

Reduce tech service time and associated costs by more than 50% per incident

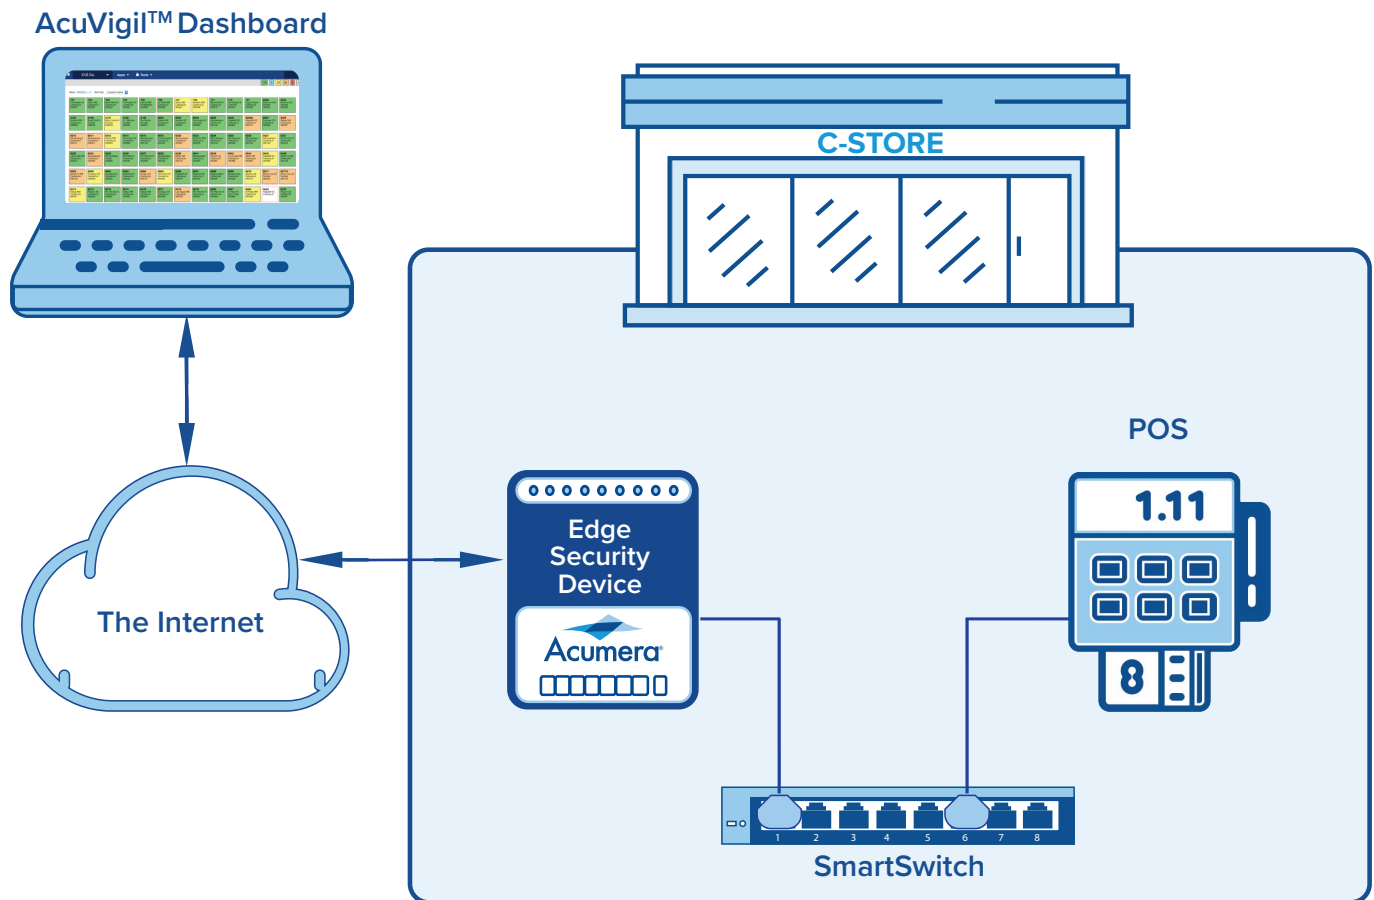

Minimize travel time with remote updates to POS and other devices

FOR MORE INFORMATION: acumera.com/aculink, 512.687.7410 or sales@acumera.net

*Average savings per site per year; varies based on per-store sales and costs

Devices are completely isolated but remotely accessible

Traffic is limited to a single port and protocol and is inspected for indicators of compromise. Remotely connecting through the AcuLink Remote Access workload is substantially more secure than plugging a laptop in at the site, where there is nothing to protect the POS.

The AcuLink Remote Access Service is part of Acumera's all-in-one solution that fully secures stores and payment networks and POS systems, and provides visibility, proactive 24x7 network support, and a suite of edge computing workloads for monitoring, compliance and analytics.
